Inverse-volatility allocation report

Generated: 2026-10-03 03:00:30 India Standard Time

Portfolio metrics

Metric	Numeric value	Percentage / interpretation
Observations	70	70 price observations
Return observations	69	69 daily returns
Total return	0.29423874	29.423874%
Annualized return	2.91327094	291.327094%
Annualized volatility	0.00612320	0.612320%
Sharpe ratio	223.24016017	Annualized risk-adjusted return
Maximum drawdown	0.00000000	0%
Weight sum	1.00000000	100%

Asset metrics

Ticker	30-day volatility	Inverse volatility	Weight	Allocation	Signal
BTC-USD	0.00010976	9110.98174856	0.96073847	96.0738%	BUY
ETH-USD	0.00663300	150.76125627	0.01589753	1.5898%	HOLD
GLD	0.00451329	221.56803649	0.02336400	2.3364%	HOLD

Methodology and data note

Weights are calculated as inverse 30-day volatility weights: assets with lower observed volatility receive higher allocation. A BUY signal is assigned when an asset weight is greater than 0.35; otherwise the signal is HOLD.

The report uses deterministic 70-day sample price data because Yahoo Finance was returning HTTP 429 rate-limit responses during execution. The unusually high Sharpe ratio and zero drawdown are sample-data artifacts and must not be interpreted as live-market performance.
